BROADCASTING

Broadcast equipment

We are leaders in broadcast, post-production and live workflow equipment provider. We have a continuous investment program, meaning we stock only the very latest equipment to support broadcasters, production companies and live event organizers both in the studio and on location. Wet or dry hire solutions are available.

Specialist camera

From handheld wireless cameras and insport on-boards, through to POV cameras, motorbike RFs and drone/helicopter gyrostabilized cameras and links, Emenem Technologies clients enjoy the many benefits of the latest specialist camera solutions.

Flypacks

We build our flyaway packages using state-of-the-art technology - including UHD, 4K and IP systems - and a full range of temporary cable solutions. Emenem Technologies flypacks can be rigged and de-rigged quickly and easily, so you can get on with the business of broadcasting without worrying about the facilities.

Permanent infrastructure build

Our specialist systems integrators install and upgrade permanent studio facilities and production workflows to the highest specifications. This comprehensive service covers planning and consultancy through to design, engineering, installation, commissioning, training, maintenance and aftercare.

OB trucks and mobile units

Our trucks and mobile units are equipped with the most advanced HD and 4K technology available, ready to be deployed anywhere in the world. Spec the package that suits you best, from options including logistics, equipment rental, systems integration and world-class crew.

OB truck builds

Our systems integration teams work with specialist vehicle manufacturers to oversee the design and build of clients' own OB trucks. We can design and build any type of vehicle or mobile unit, from rigid and expando trucks, to remote production and 'At Home' vehicles, to small camera units and pods.

Live workflow equipment

Our kit enables fast, agile and seamless workflow whether you're dealing with two camera channels or 20. We have one of the largest EVS arsenals in the world - including multiple XT-VIA live production servers - all running the latest Multicam 16.00 operating system.

Event communications

Event communications packages to suit any outside broadcast, anywhere in the world, from the smallest two-way radio hire to a multiveneue, multi-platform solution.

Live production facilities

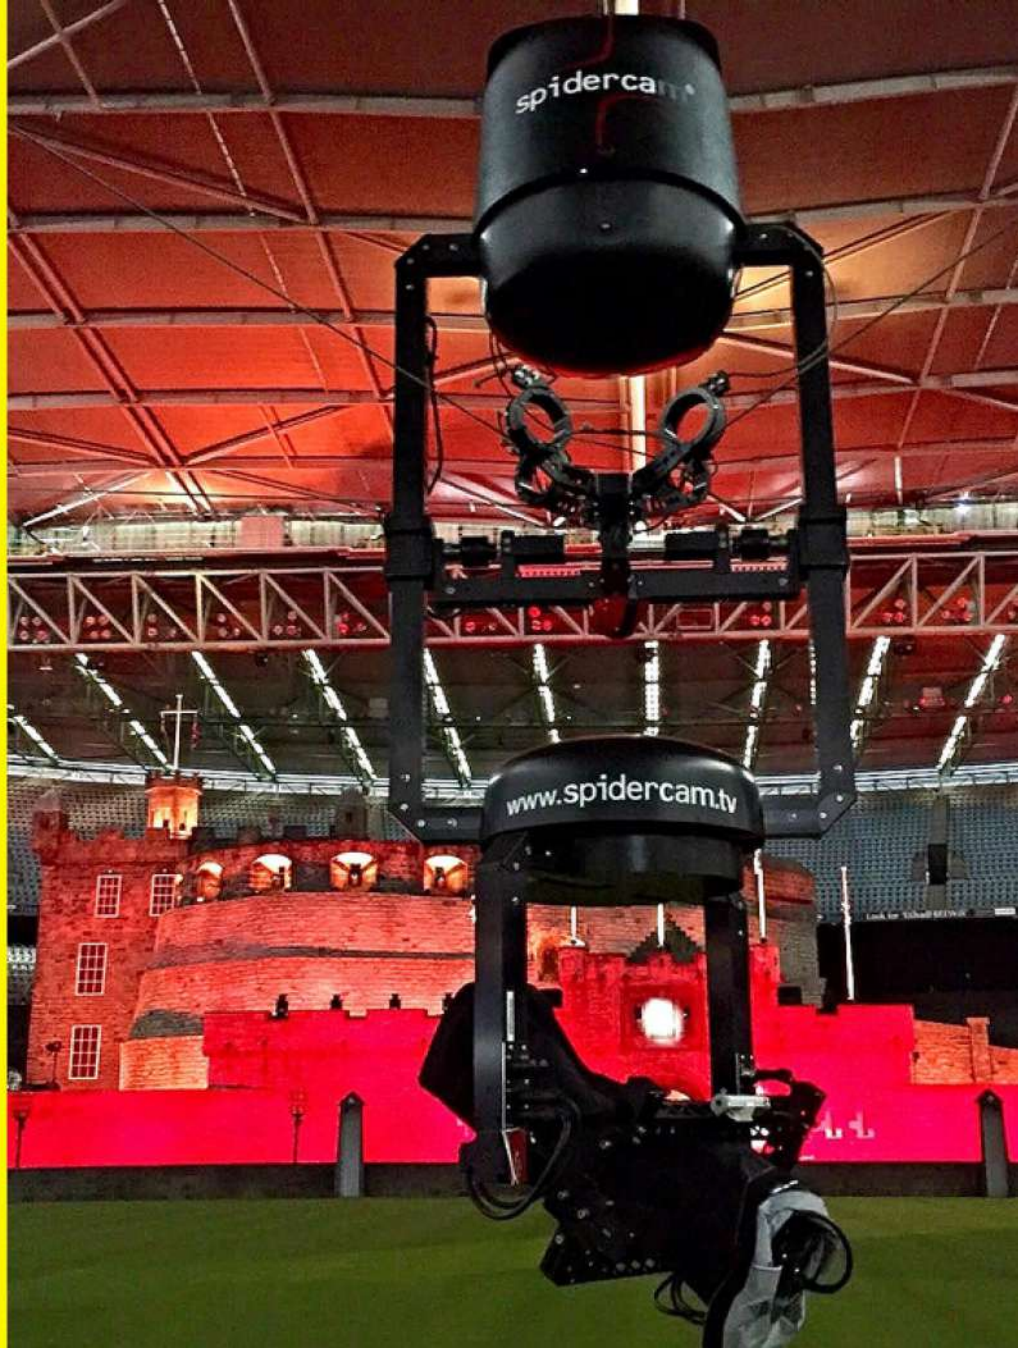

Our state-of-the-art production centers offer clients a very wide range of services, including full live remote production, live streams, social media clips, rolling edits and expertly crafted highlights. Our complementary satellite facilities are equipped with integrated EVS and AVID technology that delivers live and fast-turnaround production.

Facilities management

We often build and manage broadcast facilities on behalf of clients, calling on our systems integration expertise and production management support services to build multicamera studios for productions of any kind. This popular service allows clients to focus entirely on programming, leaving the technical and infrastructure issues to us.

Managed Services/Training

We are expert providers of managed content production services - from idea creation, through pre-production, actual shooting and post-production to media management. Our managed services enable organizations to achieve their goals of improved efficiency, use of state-of-the-art technology and access to expert levels skills normally unavailable in areas outside of their core activities.
